lotes:

- Air Carriers and Airport data came from BIRD training set.
- Airport data came from BIRD and Faker. Faker has more attributes per record, but BIRD has a higher volume of records. The two airport entities will be merged in later stage.
- Meals data came from themealdb.com API.
- Snack data came from Open Food Facts dataset.
- A new entity, Meal Service, will be created in the staging layer to connect Flight with Meal and Snack.
- · Annotated each raw table with load time.
